portfolio: <http://ajjordan.co>

Full-Stack Web Developer with a background in English Literature, the architecture and construction industry, and office administration. Experienced creative problem-solver with an insatiable curiosity and a variety of passions and interests. Adept at scouring available resources to quickly gain new skills and knowledge required to solve the challenge at hand. Focused on combining web development skills with advertorial and technical writing and business administration.

TECHNICAL SKILLS

- Command line
- HTML5, CSS3
- JavaScript, jQuery
- Bootstrap, Materialize, PureCSS, Handlebars
- Git, Git Bash
- Responsive Web Design
- Google Firebase, Amazon Web Services, MySQL, MongoDB
- Express.js
- RESTful APIs, Ajax
- Node.js
- React.js, React-Materialize
- MVC and OOCSS programming paradigms

APPLICATIONS BUILT

goodDeeds: <https://good-deed-s.herokuapp.com/>

- A full-stack MongoDB, Express, React, and Node.js app designed to directly connect skilled volunteers with people in need
- User authentication using Passport.js, express-session, and bcrypt-nodejs; uses mLab database hosting; deployed on Heroku
- goodDeeds aims to facilitate connections between skilled volunteers and people in need

xBooks: <https://xbooks-gt2018.herokuapp.com/>

- A library manager prototype created using Node, Express, Sequelize, GoogleBooks API, ESLint, and a variety of npm packages
- Allows users to search GoogleBooks API and save book data to a library page that displays the book cover image and title information

Multi-User Noise Manipulator: <https://haydest.github.io/noise-project/>

- Created using HTML, Materialize CSS, JavaScript, jQuery, the Web Audio API, AJAX, and Google Firebase
- Allows a user to create sound using an audio oscillator from the Web Audio API and listen to sounds created by other users by sending all mouse coordinate data of each live user to Firebase; upon disconnecting, a user's data is deleted from Firebase
